

Clinically focused diabetes education

Developing excellence in clinical practice

The number of people developing diabetes is increasing globally. In the UK alone diabetes is a serious problem, with a devastating impact on individuals and their families. NHS primary care, acute hospitals and community services all play a key role in responding to the recommendations of the National Service Framework (NSF) for Diabetes.

Funded places available

We work with local specialist diabetes centres and specialist practitioners in primary care to offer a growing range of courses and study days.

Modules for 2007/08
